Purchase Orders:
We will accept purchase orders with NET 30 terms, which are placed by D&B-rated U.S. businesses.

*Please provide a street address as we cannot deliver to post office boxes. For shipping via another carrier, please call us.

The Parcus PEEK CF Difference

What is Parcus PEEK CF?

PEEK CF is made of PEEK-Optima™ (by Invibio™) combined with 30% carbon fiber fill. The compound is comprised of short carbon fibers that are dispersed within a PEEK-Optima™ polymer matrix. The polymer in PEEK CF encapsulates the carbon fibers.

Although this material has been successfully used in the spine and dental industries for over ten years, **Parcus Medical is the first to make implantable products using PEEK CF for the Sports Medicine industry**.

The PEEK CF Difference

- **Strong and biocompatible**
- **Radiolucent, less imaging artifact, MR safe**
- **Twice as strong as the PEEK material used in other suture anchors**
- **Mechanical properties closer to cortical bone than titanium or biocomposites**
- **100% Inert**

Due to continuing product improvement, Parcus Medical reserves the right to change product prices and to discontinue product without prior notice.
